

PROOF BEFORE OUTPUT

The runtime trust layer for healthcare AI

AI that can prove why it was allowed to answer — and refuses when it can't.

\$3M Seed · Early Conviction Opportunity

Beth Rudden, Founder & CEO · community@bast.ai

THE SHIFT

The AI question changed.

Not “can it answer?” — but “can you prove why it was allowed to?”

In healthcare, that difference is a verdict, a breach, a life.

WHAT BAST IS

The answer-control layer between approved knowledge and AI output.

Control

Refuse

Trace

It only says what the institution can prove — and shows its work.

THE ECONOMICS

Cheaper on every answer. Defensible on the one that matters.

The same discipline that trims the token bill is what keeps you out of court.

\$5–30M+ per undefendable incident — avoided.

PROOF

Live. Paid. Patented. Pulled through healthcare.

Live deployments

Paying customers

5 patents

Healthcare pull

The names, the numbers, and the live trace are in the full deck.

How do you know?

Bast answers that question before the output reaches the user.

\$3M seed. Early conviction has the most room.
