BAST

BASTCARE PILOT
FOR HEALTHCARE NONPROFITS

Retain more of the conversation, so you can be present in the room.

BastCare is an iPhone app that turns a doctor visit into a plain-language summary.

What you get

- ✓ Free BastCare access during the pilot
- ✓ Setup and training for your team
- ✓ Support from us the whole way
- ✓ A results report for your funders and board

How it works

1. We set it up with your team.
2. Your families use it at real visits.
3. We measure results (Zarit survey) and share them with you.

17%

WHAT PUBLISHED RESEARCH SAYS

Fewer hospital returns when care programs included family caregivers.[1]

Your pilot measures results with the Zarit caregiver survey.

PRIVATE BY DESIGN

Audio is deleted once the transcript is saved. BastCare asks for consent before recording. Participants choose with a toggle whether to keep their transcripts in your organization's own secure database, so your team can learn from them. Summaries belong to the user. Your organization owns its data.
